Summary

This report has been prepared for Booskie to discover issues and vulnerabilities in the source code of the Booskie project as well as any contract dependencies that were not part of an officially recognized library. A comprehensive examination has been performed, utilising Static Analysis and Manual Review techniques.

The auditing process pays special attention to the following considerations:

- **Testing the smart contracts against both common and uncommon attack vectors.**
- **Assessing the codebase to ensure compliance with current best practices and industry standards.**
- **Ensuring contract logic meets the specifications and intentions of the client.**
- **Cross referencing contract structure and implementation against similar smart contracts produced by industry leaders.**
- **Thorough line-by-line manual review of the entire codebase by industry experts.**

The security assessment resulted in findings that ranged from Medium to informational. We recommend addressing these findings to ensure a high level of security standards and industry practices. We suggest recommendations that could better serve the project from the security perspective:

- **Enhance general coding practices for better structures of source codes;**
- **Add enough unit tests to cover the possible use cases;**
- **Provide more comments per each function for readability, especially contracts that are verified in public;**
- **Provide more transparency on privileged activities once the protocol is live.**

Overview

PROJECT NAME	Booskie (BOOSKIE)
ADDRESS	0xe1C076D22524Ed30829A45546C3A29f69a2712F4
NETWORK	Ethereum
TOTAL SUPPLY	1,000,000,000,000BOOSKIE
COMPILER VER.	v0.8.7+commit.e28d00a7
LANGUAGE	Solidity

- 0-5%
- 5-10%
- <10%

☑ **Optimization With 200 Runs**

Wallets

OWNER	0xb14e3d7B58A74BdA900387ae19A047a292505D04
DEV	0xb14e3d7B58A74BdA900387ae19A047a292505D04

Vulnerability Summary

SECURITY SCORING: 100 / 100

Vulnerability Check

Code Review

DESIGN LOGIC	PASSED
COMPILER WARNINGS	PASSED
PRIVATE USER DATA LEAKS	PASSED
TIMESTAMP DEPENDENCE	PASSED
INTEGER OVERFLOW AND UNDERFLOW	PASSED
RACE CONDITION REENTRANCY	PASSED
POSSIBLE DELAYS IN DATA DELIVERY	PASSED
ORACLE CALLS	PASSED
FRONT RUNNING	PASSED
DOS WITH BLOCK GAS LIMIT	PASSED
DOS WITH REVERT	PASSED
METHODS EXECUTION PERMISSIONS	PASSED
ECONOMY MODEL	PASSED
IMPACT OF THE EXCHANGE RATE	PASSED
MALICIOUS EVENT LOG	PASSED
SCOPING AND DECLARATIONS	PASSED
UNINITIALIZED STORAGE POINTERS	PASSED
ARITHMETIC ACCURACY	PASSED
CROSS FUNCTION RACE CONDITIONS	PASSED
SAFE ZEPPELIN MODULE	PASSED
FALLBACK FUNCTION SECURITY	PASSED

Vulnerability Check

Function Review

BUSINESS LOGICS REVIEW FUNCTIONALITY CHECKS	PASSED
ACCESS CONTROL & AUTHORIZATION	PASSED
ESCROW MANIPULATION	PASSED
TOKEN SUPPLY MANIPULATION	PASSED
ASSETS INTEGRITY	PASSED
USER BALANCES MANIPULATION	PASSED
DATA CONSISTENCY MANIPULATION	PASSED
KILL - SWITCH MECHANISM OPERATION TRAILS & EVENT GENERATION	PASSED

Owner Privileges

```
function setDevFeePercent(uint8 devFee) external onlyOwner() {
    require(devFee >= 0 && devFee <= _maxDevFee,"teamFee out of
    range");
    _devFee = devFee;
}

function setBurnFeePercent(uint8 burnFee) external onlyOwner() {
    require(burnFee >= 0 && burnFee <= _maxBurnFee,"teamFee out
    of range");
    _burnFee = burnFee;
}
```

CONCLUSION

- ☑ Owner can't mint tokens
- ☑ Owner can't limit transactions
- ☑ Owner can't set fees <25%
- ☑ Owner can't stop the contract
- ☑ Owner can't stop trading
- ☑ Owner can't block wallets
